

Symptoms

Following the 1992-93 season, there were several outbreaks of hepatitis A in the community, including a large outbreak in the elderly population. The outbreak in the elderly was associated with consumption of shellfish, particularly oysters, and was linked to a specific strain of hepatitis A virus. This outbreak was the first of several outbreaks of hepatitis A in the community, and it was the first outbreak of hepatitis A in the elderly population. The outbreak in the elderly was linked to a specific strain of hepatitis A virus, and it was the first outbreak of hepatitis A in the elderly population.
